

# Stall DRY<sup>®</sup> versus BARN FRESH<sup>®</sup>

Absorbent & Deodorizer Chart 

Both are **natural** and **safe** !  
But **WHAT** one should you be using?

### Stall DRY<sup>®</sup>

is a larger granulation and is typically ideal for Horses, Sheep, Alpacas, Llamas, Goats and Companion Animals.

### Barn Fresh<sup>®</sup>

is a smaller granulation and is typically ideal for Poultry, Cattle, Avians, Bison and Swine.

### What about Reptiles?

Stall DRY<sup>®</sup> and Barn Fresh<sup>®</sup> are super absorbents that have a quick drying formula. Applying to the entire habitat could absorb too much moisture and may be uncomfortable for your reptiles' skin. Do not cover the entire cage. Apply Stall DRY<sup>®</sup> only in corners.
